FULVIC PLUS™

Mineral Rich Liquid Fulvic Acid

Are you looking to increase nutrient uptake and promote beneficial microbes in your soil, Fulvic Plus might be just what you need.

Fulvic acid is one of the major components of humic substances, contributing to soil chemical and physical quality. Humic substances are sadly lacking in many soils due to modern agriculture practices. Humates are arguably the single most important input in high production sustainable agriculture. Humic substances make up a large portion of the dark matter in humus and are complex colloidal supramolecular mixtures that have never been separated into pure components. Since the end of the 18th century, humic substances have been designated as either humic acid (pH alkaline), fulvic acid (pH acid) or humin. Fulvic Plus is a convenient easy way to include humus into many growing applications and to help buffer chemical applications.

Ideal for – increasing nutrient uptake, using in foliar sprays and as food for microbes.

Sizes: 5L, 20L, 200L & 1000L

Benefits

- Easy, convenient application
- Helps replace organic matter in depleted soils
- Restores biological balance; energises plant cells; and enhances cell division.
- Can detoxify soils from residues and heavy metals.
- Dissolves rock minerals for greater availability
- Excellent for salty soils & irrigation water.
- Microbe friendly
- Can enhance nutrient uptake
- Can increase root development
- Improves Quality of Plants and Soil
- Excellent chelating agent for magnifying nutrient absorption
- Can improve soil structure and water retention.
- Increases stomata opening and improves transpiration
- Seed accelerator:- can promotes germination in shorter time periods.

FULVIC PLUS™ Mineral Rich Liquid Fulvic Acid

Typical Analysis * Standard Blend

Fulvic Acid	8%
pH	3.5-4
Solubility	100%
Appearance	Dark Brown liquid.
Odour	Slightly sweet odour

* Typical analysis only of bulk concentrate.
Analysis may vary due to natural inputs and dilution.

Applications

FOLIAR APPLICATIONS

- General Use – 1-5Ls per Hectare (10-50mls per 100m²)

Note – when applying foliar sprays, a mist spray is ideal (the smaller the droplet size the better) and only apply until light run off (from the plant foliage). Always test spray sensitive foliage prior to applying foliar sprays.

ROOT DRENCH (Soil / Fertigation)

- 5-10Ls per Hectare (50-100mls per 100m²)

DETOXIFY SOILS

- Up to 50Ls per Hectare (500mls per 100m²)

MINIMUM DILUTION RATES

- 1:20 soil applications
- 1:100 for foliar applications

ADDITIONAL POINTS OF NOTE

- To be used as part of a balanced nutrition program.
- Compatible with sulphate-based trace elements, calcium nitrate and soluble phosphate.
- Compatible with some herbicides, insecticides, fungicides (jar test before mixing).
- Avoid using on fruiting and flowering plants, as the dark colour of the liquid may stain the fruit or flower.
- Shake or stir well before use
- Store in a cool dry location away from direct sunlight

All recommendations are provided as general advice only. As no control can be exercised over storage, handling, mixing, application, weather, soil or plant conditions, the buyer assumes responsibility for the use of any Plant of Health products. *Note Analysis may vary slightly due to natural inputs.
