Humic PLUS™ Mineral Rich Liquid Humic Acid

Are you looking to stimulate biology in your soils, add carbon to your soils or stabilise nitrogen, then Humic Plus might be just what you need.

Humic acid is one of the major components of humic substances, contributing to soil chemical and physical quality. Humic substances are sadly lacking in many soils due to modern agriculture practices. Humates are arguably the single most important input in high production sustainable agriculture. Humic substances make up a large portion of the dark matter in humus and are complex colloidal supramolecular mixtures that have never been separated into pure components. Since the end of the 18th century, humic substances have been designated as either humic acid (pH alkaline), fulvic acid (pH acid) or humin. Humic Plus is a convenient easy way to include humus into many growing applications and to help buffer chemical applications.

Ideal for – rejuvenating depleted soils, stimulating fungi, stabilising nitrogen.

 **Sizes: 5L, 20L, 200L & 1000L**

Benefits

- Easy, convenient application
- Helps replace organic matter in depleted soils
- Can detoxify soils from residues and heavy metals.
- Nitrogen Stabilisation – can extend the performance of liquid urea
- Excellent for salty soils
- Microbe Friendly
- Can enhance nutrient uptake
- Can increase root development
- Improves Quality of Plants and Soil
- Excellent chelating agent for magnifying nutrient absorption
- Can improve soil structure and water retention.
- Seed accelerator:- can promotes germination in shorter time period.

Humic PLUS™

Mineral Rich Liquid Humic Acid

Typical Analysis * Standard Blend

Potassium Humates	9%
Humic Acid	6%
pH	8-9
Solubility	100%
Appearance	Dark Brown liquid.

* Typical analysis only of bulk concentrate.
Analysis may vary due to natural inputs and dilution.

Applications

FOLIAR APPLICATIONS

- General Use – 1-5Ls per Hectare (10-50mls per 100m²)

Note – when applying foliar sprays, a mist spray is ideal (the smaller the droplet size the better) and only apply until light run off (from the plant foliage). Always test spray sensitive foliage prior to applying foliar sprays.

ROOT DRENCH (Soil / Fertigation)

- 5-10Ls per Hectare (50-100mls per 100m²)

STABILISATION OF UREA (FOLIAR AND FERTIGATION)

- 1-1.5 litres per 15 – 20 Kg of urea (5% dilution)

SODIUM MANAGEMENT

- 1–2 litres per Hectare per irrigation

MINIMUM DILUTION RATES

- 1:100

ADDITIONAL POINTS OF NOTE

- To be used as part of a balanced nutrition program.
- May not be compatible with acidic materials (always jar test before mixing).
- Avoid using on fruiting and flowering plants, as the dark colour of the liquid may stain the fruit or flower.
- Shake or stir well before use
- Store in a cool dry location away from direct sunlight

All recommendations are provided as general advice only. As no control can be exercised over storage, handling, mixing, application, weather, soil or plant conditions, the buyer assumes responsibility for the use of any Plant of Health products. *Note Analysis may vary slightly due to natural inputs.
