MICRO-GYPTM

Biologically Enhanced Liquid Gypsum

Micro-Gyp is a quick easy way of providing a calcium boost, to ensure your plants and crops have luxury levels of calcium for excellent health, vitality, fruit quality and production.

Calcium plays a significant role in plant and soil health, and a continuous supply of calcium is needed for optimum health, yield and quality. Calcium aids in raising brix levels, due to its ability to promote the uptake of other elements and minerals. A regular application of Micro Gyp will help ensure your plants and fruit are of optimum quality, sweetness, size with maximum shelf life. In horticulture, calcium also plays a vital roll in soil structure by flocculating clay colloids allowing water, air & root movement. This is why gypsum has been described as natures "clay breaker".

Ideal for – crops, turf, horticulture, and gardens. Also, can be used to flocculate clay soils, without adversely impacting pH.

 **Sizes: 5L, 200L & 1000L**

Benefits

- Easy, convenient application
- Strengthens cell walls. Strong cell walls play a key roll in resisting insect and fungal attack.
- Enhances plant quality
- Cost effective
- Benefits soil, plants and microbes
- Excellent for sandy soils for spoon feeding calcium & sulphur
- The organic fulvic acid contained in this product can provide many benefits within itself.
- Ideal for most crops that require gypsum inputs.

Note: When using with spray tanks, spray tank will require constant agitation to prevent settlement of solids. If Micro-Gyp is inadequately diluted or agitated before application it may clog spray equipment. Premix Micro-Gyp with equal amounts of water thoroughly prior to adding to filled spray tank under agitation.

MICRO-GYPTM

Biologically Enhanced Liquid Gypsum

Typical Analysis * Standard Blend

Calcium	19%
Sulphur	15%
Organic Fulvic Acid	pH8-9

* Typical analysis only of bulk concentrate.
Analysis may vary due to natural inputs and dilution.

Applications

FOLIAR APPLICATIONS

- 3 – 5 Litres per Hectare (30-50mls per 100m²)

Note – when applying foliar sprays, a mist spray is ideal (the smaller the droplet size the better) and only apply until light run off (from the plant foliage). Always test spray sensitive foliage prior to applying foliar sprays.

Apply each season or when deficiencies are suspected. Soil & Tissue test to accurately determine requirements.

FERTIGATION OR BOOMSPRAYS

- 5 - 7 Litre concentrate Per Hectare mixed with water.

LIQUID INJECTION FERTIGATION OR BOOMSPRAYS

- At planting 2 -3 litre concentrate per Hectare mixed with water.

MINIMUM DILUTION RATES

- 1:100 (10mls per litre)

SOIL APPLICATIONS

- 10 – 30 L per Hectare (100 – 300mls per 100m²)

NOTES

- To be used as part of a balanced nutrition program.
- Do not apply during flowering (may leave residue);
- Compatible with most fertilisers including microbe products but jar test first.
- Trial on acid loving plants first.
- Avoid contact with eyes.
- Contains organic and inorganic inputs
- Avoid breathing vapour and wash hands after use.
- Shake or stir well before use
- Store in a cool dry location away from direct sunlight

All recommendations are provided as general advice only. As no control can be exercised over storage, handling, mixing, application, weather, soil or plant conditions, the buyer assumes responsibility for the use of any Plant of Health products. *Note Analysis may vary slightly due to natural inputs.
